

# Women in STEM Wordsearch

## STEM is for everyone!

We desperately need more women in STEM! At the moment, women only make up about a quarter of the STEM workforce, and only 10% of the engineering workforce. But women have discovered and contributed many things to our society throughout history.

## How many can you find?

Hidden in the grid opposite are the surnames of thirteen pioneering women engineers - how quickly can you find them all?

The words read horizontally, vertically, diagonally and backwards.
