SCIENCE

What actually is science?

Simply put, science is all about making sense of the world by watching, listening, observing, and recording. It's all about acting on our curiosity to understand the world and the way it behaves.

How many can you find?

Hidden in the grid opposite are 20 different science words you might learn about in science lessons - how quickly can you find them all?

The words read horizontally, vertically and diagonally.

Challenge yourself!

Try to write what the words mean and see if you can make connections between words and group them together.
